LION®
ready for action

INTRODUCING

Reliant™ Conversion Strap

Quick Drag Rescue Device

FEATURES & BENEFITS

- **Intuitive by Design:** Pull. Hook. Cinch. Easy to remember. Easy to teach.
- **Faster Than Traditional Methods:** Deploys in as little as 14 seconds. Fewer steps. Less time. Less air lost.
- **Lower Risk:** No SCBA conversion. No fine motor skills. No guesswork.
- **Built Into The Gear:** Integrated pocket and pant interface keeps it secure and accessible.
- **Retrofittable:** Works with existing turnout gear.
- **Air Is Life:** Applies controlled force to the body, not the air system, helping maintain the facepiece seal when it matters most.

DESIGNED FOR FIREFIGHTER RESCUES WHEN EVERYTHING'S ON THE LINE.

LION®
ready for action

HOW IT WORKS:

PULL: Deploy directly from its dedicated pocket. No SCBA disassembly.

HOOK: Clip into the interface point without converting the pack or threading webbing.

CINCH: Tighten to create a secure, balanced drag position that stays attached during movement.

Reliant™ Conversion Strap

Quick Drag Rescue Device

The LION Reliant Conversion Strap delivers a purpose-built, controlled, and repeatable solution compared to traditional DRDs that are rarely used and hard to reinstall, SCBA conversions and packaging straps that require extra steps and precision, and webbing or grab-and-go methods that are fast but risk losing the pack. Built for balanced protection, it supports firefighters facing not only heat but also exhaustion, panic, and the lost seconds that determine outcomes. Designed for real-world conditions, it deploys from any position without moving the downed firefighter, stays attached to prevent drops, remains out of the way until needed, and can even be self-deployed if the rescuer is injured or trapped. Fast, intuitive, and ready when everything is on the line, the LION Reliant Conversion Strap gives crews a simpler, quicker way to move a downed firefighter without complex conversions or fine motor skills
